

Risks - Social Control

Will monitoring technologies lead to ever greater surveillance, restrictions on mobility and other forms of social control?

maybe /

? Climate change conferences - people travelling worldwide to talk! Is it really time to get videoconferencing working?

7 8

It's annoying that people
power (100W per person) is
so little.
But eg wind up radio works
What else?

How can we power life on earth?

Interventions - Energy

geeKyoto eNotebook: your ideas on intervention and risk

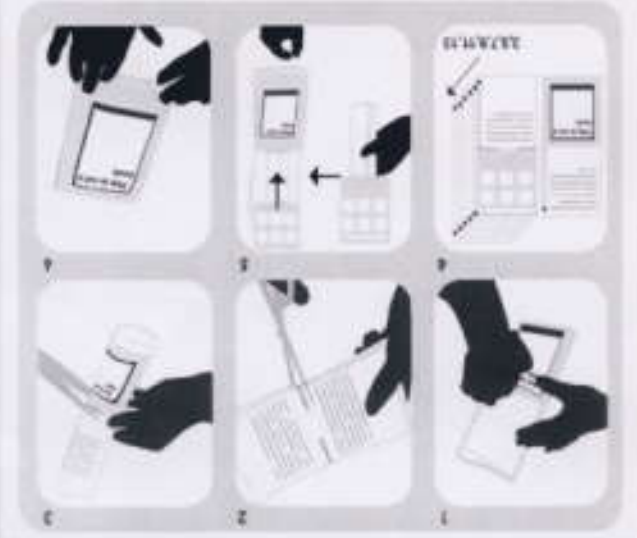

geeKyoto 2008

This eNotebook is a space for you to share your thoughts and ideas, observations and hopes, fears and aspirations for the future of the planet. The compass below suggests four different areas of intervention and risk. Use this eNotebook to write, doodle, scribble or draw your ideas on:

- **Interventions** you think can or should be made in the four areas (food, energy, economics and health) or others you think are missing;
- **Risks** from such interventions e.g.: social control, displaced consumption, 'Pyrrhic Victories' and resource conflict.

These eBooks will be collected up, scanned and made into a publicly accessible digital library to inform and help shape future geeKyoto events.

 geekyoto eBook: your ideas on interventi

Risks - Conflict

Are we facing new conflicts not only over resources (water, oil, raw materials etc) but also over the right to benefit from development?

Yes

Your Name..... *Laura*

Here are the key themes as we see them now, sometimes they are in opposition, other times not. What's missing from this matrix? Does each area deserve the same degree of attention and effort? Mark off how much you think each area should receive.

What is the bottom line for life on earth?

Interventions - Economics

Interventions - Food

How can we nourish life on earth?

Look at eating fish not meat.
Then look at macro ecology
issues relating to overfishing &
fish population dynamics.

Animals do more than provide
meat - wool, leather. Animal power.

6 5

How can we improve the health of life on earth?

Interventions - Health

Risks - Displaced Consumption

Are we just shifting the sites of production and
consumption to somewhere else?

seems so

Are we just inventing more polluting technologies
to save us from the effects of industrialisation and
the consumer society?
Particularly in consumer
electronics right now. Huge numbers
of new devices to green your
home are in development. Either
cheap enough to be mass market and
made in China, or premium shift made
"in a green way" which only the rich
can afford.
Social issue: who helps poor
Western consumers make greener
choices? Or learn about their
emissions?
