

Risks - Social Control

Will monitoring technologies lead to ever greater surveillance, restrictions on mobility and other forms of social control?

How can we power life on earth?

Interventions - Energy

Living In The Changed World
 Saturday 17th May 2008. Conway Hall, London.

This eNotebook is a space for you to share your thoughts and ideas, observations and hopes, fears and aspirations for the future of the planet. The compass below suggests four different areas of intervention and risk. Use this eNotebook to write, doodle, scribble or draw your ideas on:

- **Interventions** you think can or should be made in the four areas (food, energy, economics and health) or others you think are missing;
- **Risks** from such interventions e.g.: social control, displaced consumption, 'Pyrrhic Victories' and resource conflict.

These eBooks will be collected up, scanned and made into a publicly accessible digital library to inform and help shape future geekyoto events.

geekyoto eBook: your ideas on intervention

Risks - Conflict

Are we facing new conflicts not only over resources (water, oil, raw materials etc) but also over the right to benefit from development?

Your Name.....

Here are the key themes as we see them now, sometimes they are in opposition, other times not. What's missing from this matrix? Does each area deserve the same degree of attention and effort? Mark off how much you think each area should receive.

What is the bottom line for life on earth?

Interventions - Economics

Risks - Pyrrhic Victories

Are we just inventing more polluting technologies to save us from the effects of industrialisation and the consumer society?

Risks - Displaced Consumption
Are we just shifting the sites of production and consumption to somewhere else?

Interventions - Health

How can we improve the health of life on earth?

Interventions - Food
How can we nourish life on earth?
